

Spotlights for docks

The installation of a spotlight on the loading dock will allow the **vehicle to be illuminated** during the process of loading or unloading the merchandise, **avoiding unnecessary accidents** due to the lack of lighting.

For the safety of a loading dock and the optimal visibility of the workers in the performance of their functions, it is necessary to have light bulbs that offer good lighting in the workspace.

Alapont Led Spotlights provide brighter light inside the trailer, helping to create a safe work environment with **minimal power consumption**.

Dock light DM01 LED

Total arm lenght extended	39"
Adjustment radius	180°
Built in safety power supply	24/20V
Steel profile	1,6 x 1,2 x 0,07"
Power supply cable	0,07 x 0,04"
Power supply cable lenght	59"
Light intensity	1500 Lm
Electricity socket	Single phase 220V

Technical description

- ✓ Protection against overheating, against reverse polarisation.
- ✓ The lamps comply with EMC Directive 2004/108/EC.
- ✓ They do not emit electromagnetic interference as well as they are resistant to it's influence.
